

Restaurant Mock-up

1. Introduction

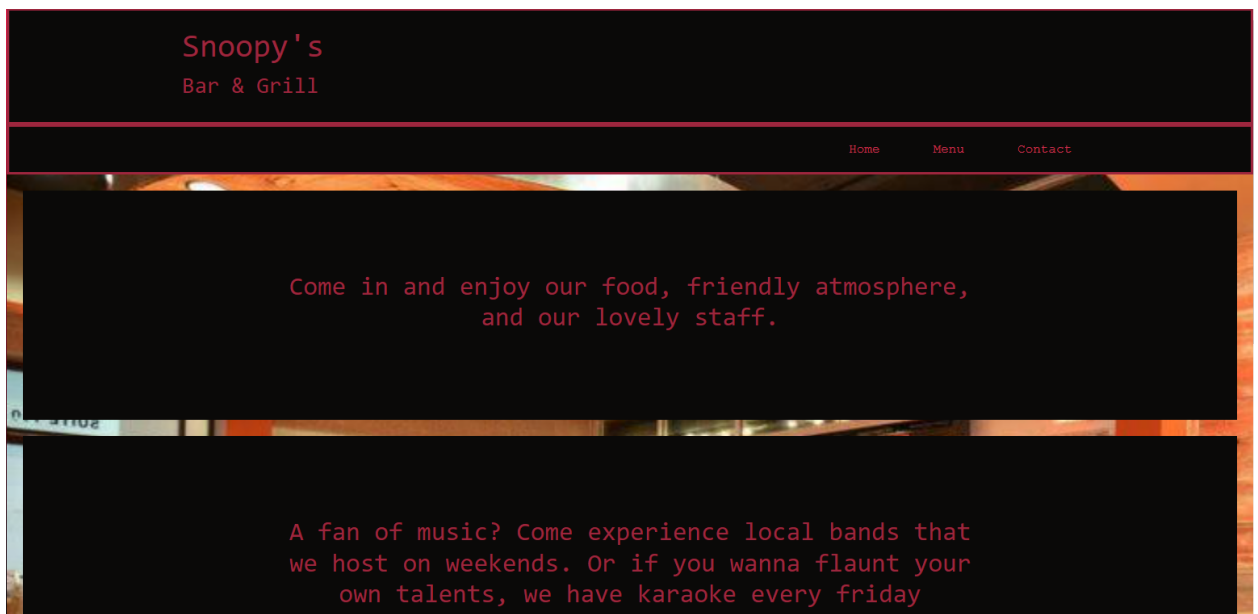

- A mock-up website for a fake bar and grill restaurant.

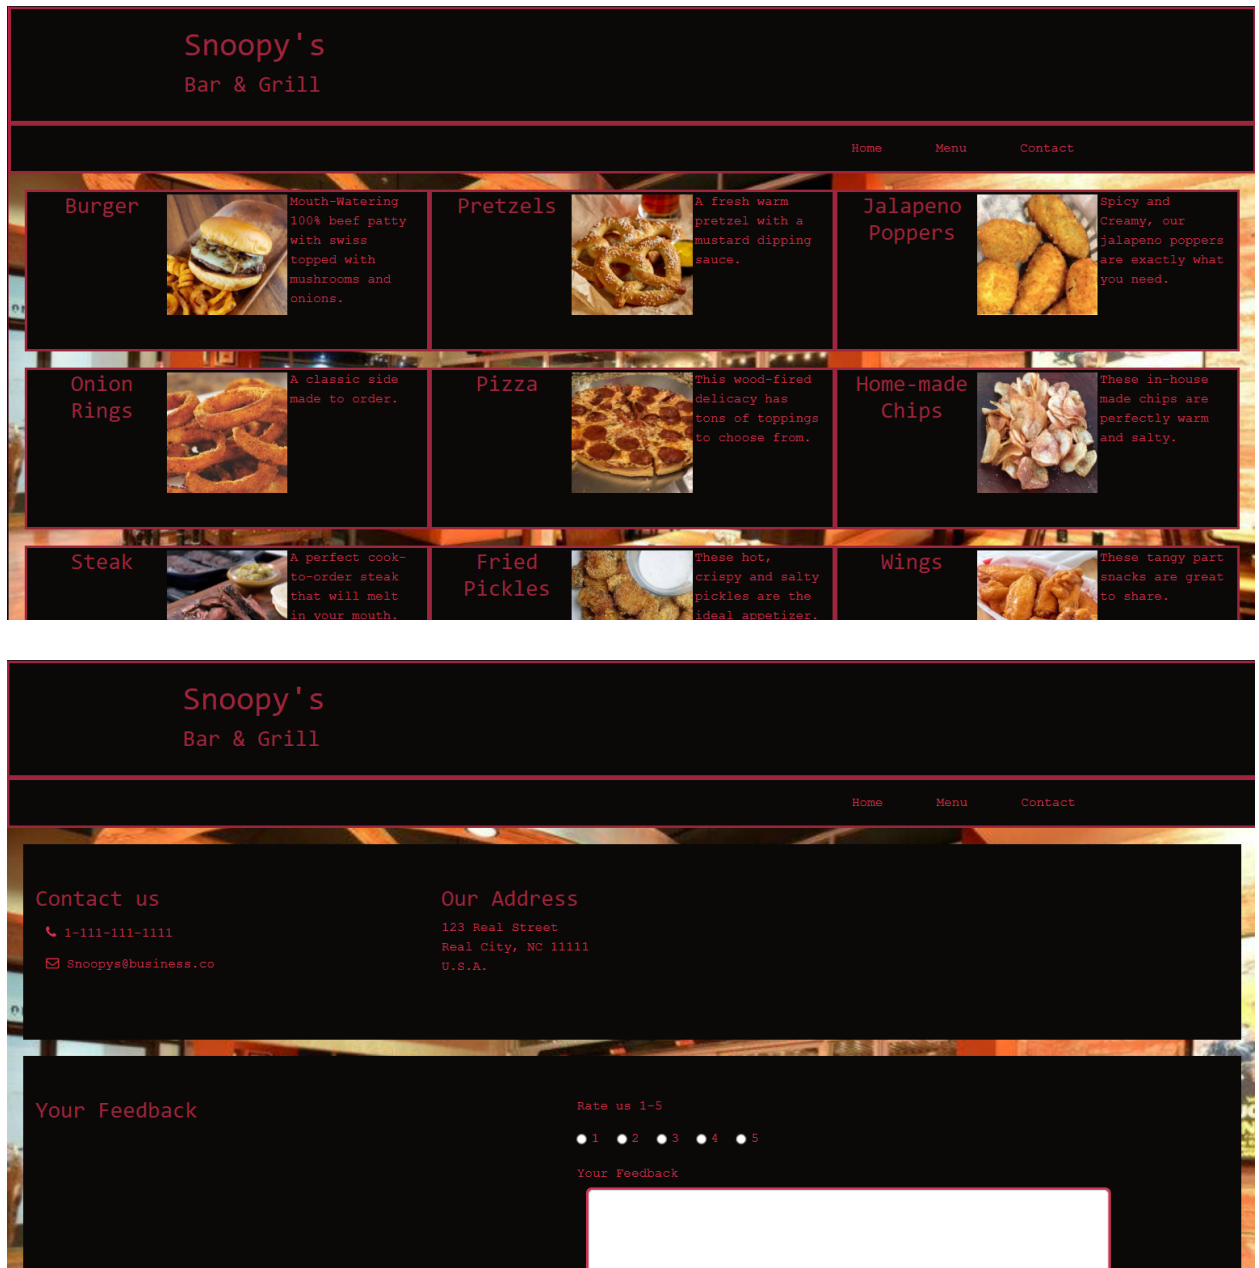

2. Design and Implementation

Give a detailed description of the design and implementation of your project.

In particular, this section should contain:

- I followed the design of some other restaurant websites and the NuCamp site we've been working on over the course.
- I wanted to do a bit more with modals and spruce up the design a bit but was unable to get to that.
- I used bootstrap's col and rows to help with maintaining things. I also used the navbar that we learned about since that seemed like a great way of implementing it.

3. Conclusions

- I learned a lot about bootstrap's grid system which will help a lot in organizing web pages.
- I like how the menu page looks, with the rows of menu items. I wish I had more time to implement some of the other ideas I had.

- I spent a lot of time (maybe too much) trying to figure out a design/color scheme for the website. I probably should have gave myself more time to actually write the code.
